How to Get Around

Help the conservation effort by following all federal, state, and local laws

MCAS Yuma Range Personnel prefer to use a mobile application called Avenza to navigate the BMGR. The application is available for both Apple and Android users.

In order to keep recreation areas open to the public, we must all do our part to protect the fragile plant and animal species found in the Sonoran Desert and by extension the BMGR-W. The best way to accomplish this mission is to stay on established roads and limit the human foot print within the desert landscape.

About Avenza

- Avenza can be used without cell phone service
- Maps are georeferenced (meaning you can find yourself and view your coordinates)
- You have the ability to trace your step using the tracking feature
- You can plot your own points
- There are multiple coordinate display options
- Avenza allows you to store up to three maps for FREE
